Notes:	<p>Active Rest: A day where you don't run but should still get out and get the body moving. It is a great way to loosen up after the weekend of training. Can be biking, swimming, paddle boarding or other sports that don't include any type of running.</p> <p>Rest Days: Are great days to catch up on stretching and doing light strength work. Injury prevention is a big part of training for long events like this.</p> <p>Tempo: Should be able to maintain for the length of the interval but will be tough to do.</p> <p>Steady: Right around the limit of being able to maintain a conversation</p> <p>Long run: Can be done on road or trails, don't be afraid to cut some distance if on technical trails and the run is getting too long in duration.</p>
